CYBER GC

LEGAL - CONSULTING - BOARD

LET US GIVE YOUR LAW FIRM A

CYBER HEALTH CHECK

WHO WE ARE?

Cyber GC specialises in cyber security legal advice, training and support for Australian law firms and lawyers, without the technical jargon. We are lawyers, we have worked in and run law firms. We know what you are facing.

We can help you prepare for, defend and recover from a cyber security attack.

WHAT WILL A HEALTH CHECK DO?

We all know that Australian law firms need to improve their cybersecurity. But it all seems so technical, and all to do with IT. THAT IS A MYTH.

A Cyber GC Health Check will help you assess your 'whole of firm' cybersecurity exposure, including legal, supply chain, policy, and culture. We can then help you take the steps to become cyber-ready.

WHAT DO WE LOOK AT?

Unlike other health checks, at Cyber GC we include a legal review. We are cybersecurity legal experts. We look at your customer terms, supplier contracts, procurement processes, policies, training programs, risk framework, culture, and incident response planning. We can tailor our review to meet your needs.

HOW LONG DOES IT TAKE?

Our Health Check uses a combination of document reviews and interviews. We can do this in as little as a day if all the information is provided and people are available.

WHAT DO WE GET?

You will get a report on the recommended actions you can take to uplift your business's cybersecurity. This can become your roadmap to getting cyber-ready.

5 NON-TECHNICAL THINGS

YOU AND YOUR FIRM CAN DO TO IMPROVE YOUR CYBERSECURITY

1 MAKE CYBERSECURITY PART OF YOUR FIRM'S 'CULTURE'

- Security must be part of the culture of every law firm and led from the partnership
- Having an 'it's all too hard' approach to security infects the culture of the firm

2 KNOW YOUR DATA

- You should know what information you hold about and for your clients, where it is stored and if you still need it
- Once you know what data you need, work out how you are going to protect it

3 SECURITY POLICIES

- Set security policies for your firm and enforce them
- Look at the security your people have on their devices and how they use them
- By having good practices in place, you can reduce your risk

4 TRAIN YOUR PEOPLE

- Security is everyone's job
- Train your team so they understand the role they have to play in the security of your firm

5 HAVE AND PRACTICE AN INCIDENT RESPONSE PLAN

- An incident response plan is not a technical plan, but it needs to be practiced like a fire evacuation plan
- Every firm should have cybersecurity incident responders on retainer to help
